

Sheffield Village Culvert installation Guidelines:

All roadside ditch culverts must be completed using an appropriately sized RCP material (reinforced concrete pipe) or appropriately sized double wall smooth interior HDPE (High density polyethylene) pipe. No substitutions will be allowed. Sheffield Village will install ditch culverts at the owner's expense for \$12.00 per lineal foot. This price includes the installation of 12" RCP or HDPE pipe and the bedding material. Larger diameter pipe may be required and is installed at an additional charge. Catch basins needed (as specified by the Village Administrator) shall be of concrete construction rated at least H-20. Dirt to cover the pipe is limited to the amount that is excavated from the project. Any additional fill required is the responsibility of the property owner.
